

Black Hole Sub instructions

step 1

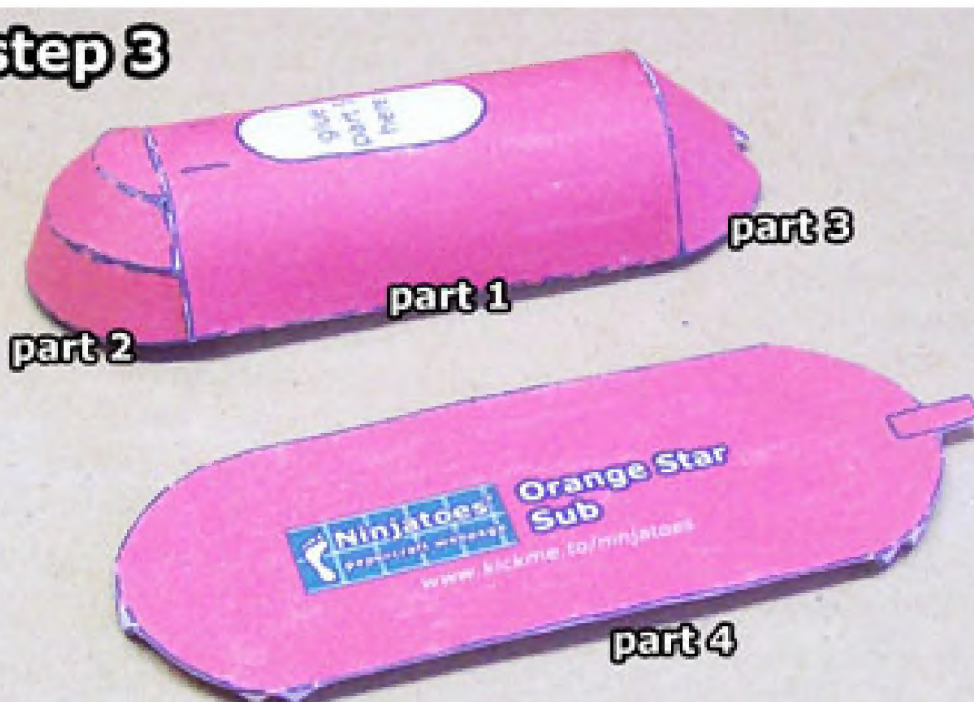

Print the parts on thicker paper (I always use 200 gsm paper myself) and gather your papercrafting tools!

step 2

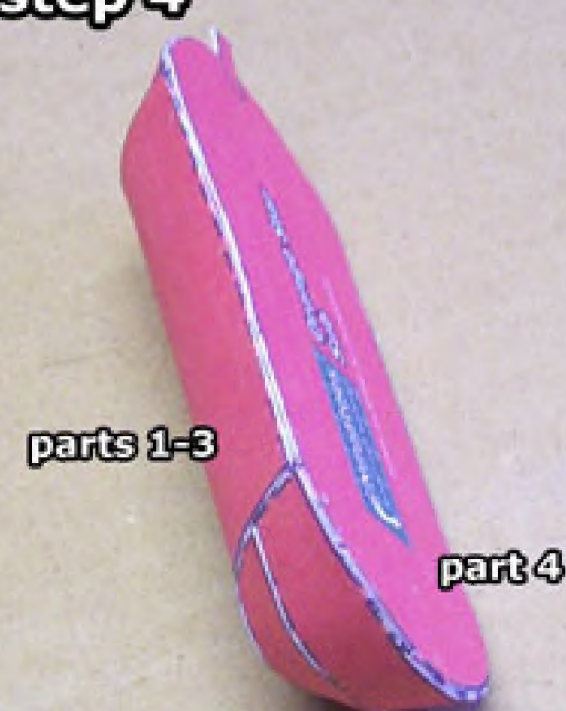

Pre-shape and assemble parts 1-3...

step 3

...and then glue them together as shown here. Then cut out part 4...

step 4

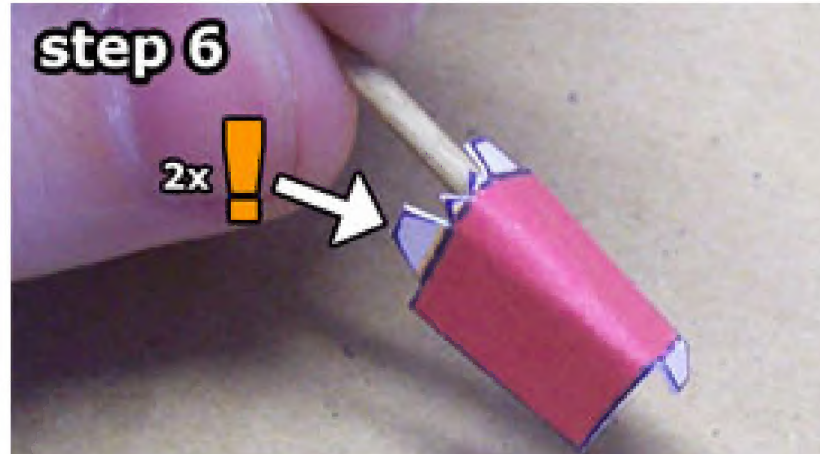

...and then glue it to the bottom of parts 1-3 like so.

step 5

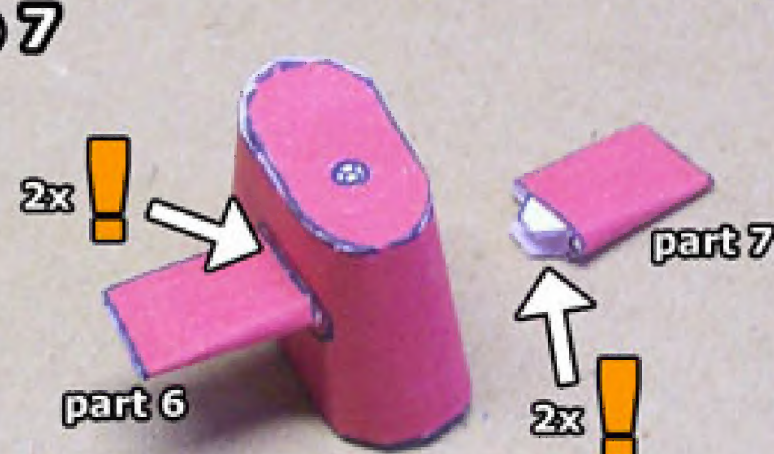

Pre-shape and assemble part 5, and don't forget to cut out the 2 slits on either side!

step 6

Pre-shape the middle of part 6 around a toothpick (DON'T score or fold the two bigger glueing tabs!)

step 7

...then glue together the back and side of the fin, and glue it to part 5 by sliding the two larger glueing tabs through the slits. Do the same for part 7.

step 8

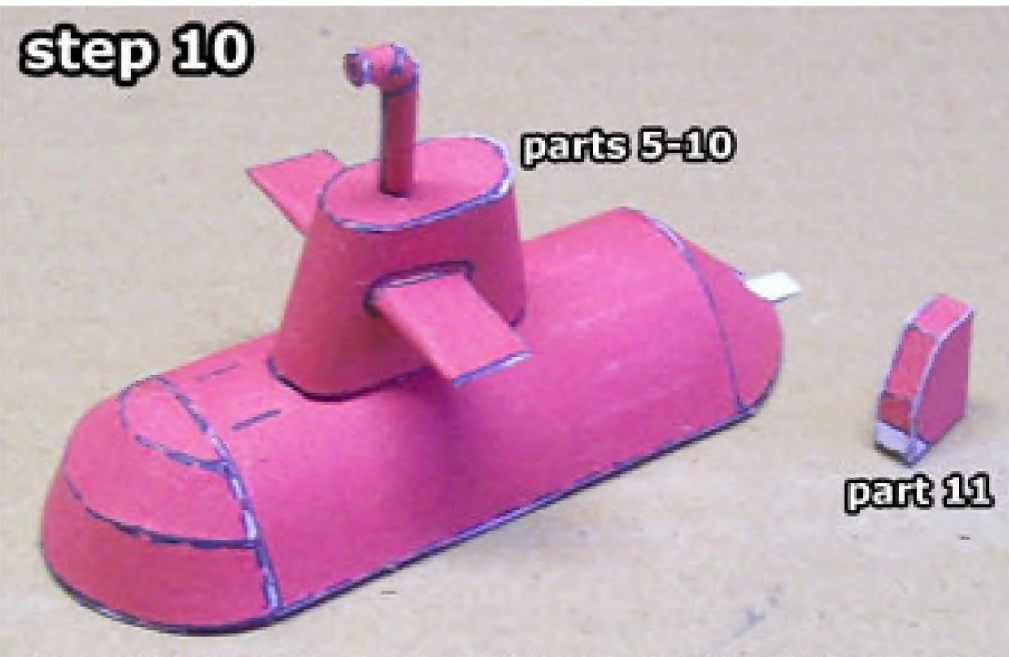

Use a toothpick to pre-shape parts 8-9 so you can easily assemble them. Then glue them together...

step 9

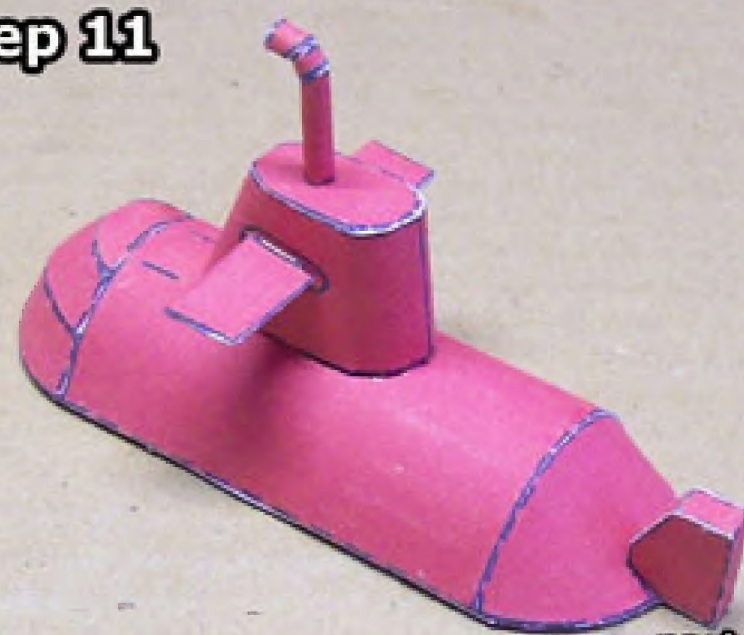

...and then glue it on top of part 5 as indicated.

step 10

Glue the tower (also called the sail; parts 5-10) on top of the hull as indicated. Then cut out and assemble part 11...

step 11

part 11
...and then glue it to the back of the submarine.

step 12

To build the submerged version (just the periscope) cut out and assemble parts 12-14...

step 13

...and then glue them together like so. The periscope can stand by itself, but for better balance, you can also glue it to part 15 if you want.

step 14
